Solange Gonzalez Ferrero

Full Stack Developer & AI Builder | Next.js · React · Angular ·
Supabase · LLMs · Claude Code | 20+ yrs | Bilingual ES/EN
Buenos Aires, Buenos Aires Province, Argentina

Summary

Full Stack Developer with over 20 years of experience in web development, UI/UX design, and team leadership. Career spanning companies like NTT DATA and Globant, with projects for clients including Disney, Sony, EA, Sabre, and Deloitte. Proficient in JavaScript (ES6+), TypeScript, React, Next.js, Angular, HTML, and CSS on the frontend — and Supabase, REST APIs, Flask/Python, and serverless architecture on the backend. Also experienced in Magento / Adobe Commerce frontend development and CMS platforms like Typo3 and WordPress. Beyond code, I own the full product lifecycle: SEO, analytics, performance optimization, hosting (Plesk), and Cloudflare — currently running a live eCommerce at mercadodesemillas.com. I build with AI as a core tool. My most recent project is GreenkedIn — a LinkedIn-inspired social platform for the cannabis industry in Latin America, built end-to-end with Claude Code on Next.js 15 (App Router with React Server Components and Server Actions), TypeScript, Prisma + Supabase (Postgres, Auth, Storage), deployed on Vercel. I actively explore and adopt emerging AI tooling as it ships — agentic coding workflows with Claude Code (custom hooks, subagents, MCP servers, skills), the Anthropic SDK with prompt caching and tool use, autonomous agents for repetitive engineering tasks, and IDE-native AI assistants. I try new releases on real projects to see what genuinely improves the workflow, and integrate the ones that do. I also automate GitHub workflows using Claude to generate backlogs and push issues programmatically. I'm genuinely excited about AI and what it makes possible — not just as a tool, but as a new way of building. I thrive on challenges and love working on projects that push boundaries. Right now I'm looking to bring together everything I've built and learned to join a team where I can keep growing, integrate AI meaningfully, and contribute real value. Bilingual in Spanish and English, eligible to work in Argentina and the EU.
